Comments: (If possible, please reference section number and/or page number in document if applicable.)

1 The decisions that our country makes regarding where and whether we create a centralized storage facility for our country's radioactive waste (high or low level) should be taken very seriously. I feel, after looking at the facts, that Yucca Mountain is a very bad idea. First of all, there are approximately 33 known fault lines in this area. This creates, of course, a very dangerous situation with the possibility of containers breaking should a quake happen. It is also important to

2 move nuclear waste as little as possible. As most of the nuclear waste in the US is produced on the East coast, if there is going to be a centralized storage facility, it would be best - simply in terms of limiting the amount of transportation risks - to consider an area around the central section of where it is being produced, rather than an area practically all the way across the country on the West Coast, exposing a far greater amount of people to cancer-causing materials along the way.

Please note: For your comment(s) to be considered in the Final Environmental Impact Statement, your comment(s) need to be received by the Department of Energy by February 9, 2000. To the extent practicable the Department will consider comments received after February 9.

Please feel free to attach additional pages; more postage may be needed. If you prefer to mail your comments, you may use the back side of this sheet as a postage-paid, self-mailer. To do so, fold in thirds along the dotted line so address and postage-paid notice are visible; then secure with tape.
